Molecular Detection of Human Parasitic Pathogens

Molecular Detection of Human Parasitic Pathogens

Traditionally, laboratory identification of parasites has relied upon various phenotypic procedures that detect their morphological, biological, and immunological features. Because these procedures tend to be time-consuming and technically demanding, molecular methods based on nucleic acid amplification technologies have been increasingly utilized for rapid, sensitive, and specific characterization of parasites.

The large number of original and modified molecular protocols that have been developed over the years creates a dilemma for those attempting to adopt the most appropriate protocol for streamlined identification and detection of human pathogenic organisms of interest. Part of a four-volume collection, **Molecular Detection of Human Parasitic Pathogens** provides a reliable and comprehensive resource on the molecular detection and identification of major human parasitic pathogens.

This volume contains expert contributions from international scientists involved in human parasitic pathogen research and diagnosis. Following a similar format throughout, each chapter includes:

- A brief review on the classification, biology, epidemiology, clinical features, and diagnosis of an important pathogenic parasitic genus/group
- An outline of clinical sample collection and preparation procedures and a selection of representative stepwise molecular protocols
- A discussion on further research needs relating to improved diagnoses of major human parasitic pathogens

This versatile reference on molecular detection and identification of major human parasitic pathogens is an indispensable tool for upcoming and experienced medical, veterinary, and industrial laboratory scientists engaged in parasite characterization. It is also suitable as a textbook for undergraduate and graduate students majoring in parasitology.

From reader reviews:

Nathan Wilson:

Do you have favorite book? In case you have, what is your favorite's book? E-book is very important thing for us to be aware of everything in the world. Each publication has different aim or maybe goal; it means that book has different type. Some people really feel enjoy to spend their time to read a book. They can be reading whatever they consider because their hobby is usually reading a book. Think about the person who don't like reading a book? Sometime, individual feel need book whenever they found difficult problem or exercise. Well, probably you'll have this Molecular Detection of Human Parasitic Pathogens.

Rene Pina:

In this 21st hundred years, people become competitive in most way. By being competitive at this point, people have do something to make these survives, being in the middle of the actual crowded place and notice by means of surrounding. One thing that occasionally many people have underestimated that for a while is reading. Yeah, by reading a reserve your ability to survive increase then having chance to stand than other is high. To suit your needs who want to start reading a new book, we give you this kind of Molecular Detection of Human Parasitic Pathogens book as basic and daily reading e-book. Why, because this book is usually more than just a book.

April Hall:

Nowadays reading books become more and more than want or need but also become a life style. This reading habit give you lot of advantages. The benefits you got of course the knowledge the rest of the information inside the book in which improve your knowledge and information. The information you get based on what kind of reserve you read, if you want attract knowledge just go with education and learning books but if you want sense happy read one together with theme for entertaining like comic or novel. The actual Molecular Detection of Human Parasitic Pathogens is kind of book which is giving the reader unforeseen experience.

Kimberly Foust:

Reading a publication make you to get more knowledge as a result. You can take knowledge and information from your book. Book is prepared or printed or created from each source that filled update of news. With this modern era like currently, many ways to get information are available for a person. From media social like newspaper, magazines, science reserve, encyclopedia, reference book, new and comic. You can add your understanding by that book. Are you hip to spend your spare time to spread out your book? Or just looking for the Molecular Detection of Human Parasitic Pathogens when you required it?
