Stratified Flows is the second edition of the book Dynamics of Nonhomogenous Fluids. This book discusses the flow of a fluid of variable density or entropy in a gravitational field. In this edition, corrections have been made; unnecessary parts have been omitted; and new sections as well as notes on results related to the subject have been added.

This book includes a general discussion of the effects of density or entropy and the structure of stratified flows; waves of small amplitude; the Eigenvalue problem; dependence of phase velocity on wavelength; wave motion; steady flows of finite amplitude; and types of solutions for steady flows. This edition also covers other topics such as hydrodynamic stability; flows in porous media; and the analogy between gravitational and electromagnetic forces.

This text is recommended for those in the field of physics who would like to be familiarized with stratified flows and its related concepts.

From reader reviews:

Kurt Hooper:

The ability that you get from Stratified Flows (Applied mathematics and mechanics) will be the more deep you looking the information that hide inside the words the more you get considering reading it. It doesn't mean that this book is hard to be aware of but Stratified Flows (Applied mathematics and mechanics) giving you thrill feeling of reading. The copy writer conveys their point in selected way that can be understood by anyone who read it because the author of this book is well-known enough. This book also makes your own vocabulary increase well. Therefore it is easy to understand then can go along with you, both in printed or e-book style are available. We suggest you for having that Stratified Flows (Applied mathematics and mechanics) instantly.

Lawrence Elam:

Would you one of the book lovers? If yes, do you ever feeling doubt if you are in the book store? Aim to pick one book that you never know the inside because don't judge book by its include may doesn't work is difficult job because you are scared that the inside maybe not because fantastic as in the outside appear likes. Maybe you answer might be Stratified Flows (Applied mathematics and mechanics) why because the wonderful cover that make you consider concerning the content will not disappoint you. The inside or content will be fantastic as the outside as well as cover. Your reading 6th sense will directly guide you to pick up this book.

Cari Sexton:

Reading a book to be new life style in this 12 months; every people loves to learn a book. When you read a book you can get a lot of benefit.
