Taxonomy of Software Types. A Review of Information Systems and Software Engineering Literature (Aus der Reihe: e-fellows.net stipendiaten-wissen) (German Edition) Can Paul Bineytioglu

Studienarbeit aus dem Jahr 2014 im Fachbereich Informatik - Wirtschaftsinformatik, Note: 1,3, Universität Mannheim, Sprache: Deutsch, Abstract: The objective of this paper is to provide a literature review on the current state of research on software product types in the information systems and software engineering literature. In particular, this paper provides an overview of currently developed software types by examining existent taxonomies and classification approaches in this field. Additionally, taxonomy development procedures will be analyzed, and it will be investigated whether there exists a well-recognized taxonomy development procedure in information systems and software engineering.

Nowadays, more and more problems in business and in everyday life are solved by software. While our grandparents know almost all the streets they live in by heart, our generation uses navigation software on mobile devices to get from one place to another place that is only a few kilometers away. 20 years ago, nobody could imagine such a digital world we are living in today. Probably nobody would believe that a supercomputer (IBM's Watson) would ever beat human beings in the Jeopardy television show.

With considerable improvements and innovations in technology in the recent years, the software industry has seen many changes and has made substantial advancements. New software development techniques, procedures and capabilities have evolved. Moreover, the variety of types of software products has further diversified and application areas of software both in business and in the private sector have immensely expanded. For instance, real-time data processing applications and software for big data analytics have gained high importance to face the trend of big data in today's business environment.

The increasing number of software types, however, increases the research efforts of researchers as long as newly developed software types are not well classified. Appropriate taxonomies are important in research and practice since the structurization of objects helps researchers and practitioners understand similarities, differences and relationships within complex fields and consequently facilitates research. Grimshaw (1996) formulated this problem very appropriately: "The lack of a commonly agreed taxonomy raises the barriers to entry to the subject of information systems and potentially leads to a waste of energies chasing the same thing by a different name."

From reader reviews:

Daniel Spencer:

This book untitled Taxonomy of Software Types. A Review of Information Systems and Software Engineering Literature (Aus der Reihe: e-fellows.net stipendiaten-wissen) (German Edition) to be one of several books this best seller in this year, that is because when you read this e-book you can get a lot of benefit into it. You will easily to buy that book in the book retail store or you can order it via online. The publisher in this book sells the e-book too. It makes you more easily to read this book, because you can read this book in your Touch screen phone. So there is no reason to you to past this reserve from your list.

Larry Parker:

The particular book Taxonomy of Software Types. A Review of Information Systems and Software Engineering Literature (Aus der Reihe: e-fellows.net stipendiaten-wissen) (German Edition) has a lot details on it. So when you check out this book you can get a lot of gain. The book was authored by the very famous author. Tom makes some research prior to write this book. This book very easy to read you may get the point easily after scanning this book.

Patrica Fussell:

Are you kind of stressful person, only have 10 or 15 minute in your day time to upgrading your mind expertise or thinking skill actually analytical thinking? Then you are having problem with the book than can satisfy your short time to read it because this all time you only find guide that need more time to be learn. Taxonomy of Software Types. A Review of Information Systems and Software Engineering Literature (Aus der Reihe: e-fellows.net stipendiaten-wissen) (German Edition) can be your answer since it can be read by anyone who have those short extra time problems.

Belinda Bridges:

Reading a book being new life style in this calendar year; every people loves to learn a book. When you read a book you can get a large amount of benefit. When you read textbooks, you can improve your knowledge, simply because book has a lot of information into it. The information that you will get depend on what forms of book that you have read. If you need to get information about your analysis, you can read education books, but if you want to entertain yourself you are able to a fiction books, these us novel, comics, in addition to soon. The Taxonomy of Software Types. A Review of Information Systems and Software Engineering Literature (Aus der Reihe: e-fellows.net stipendiaten-wissen) (German Edition) offer you a new experience in reading a book.
