Distributed Situation Awareness: Theory, Measurement and Application to Teamwork (Human Factors in Defence) Dr Daniel P Jenkins, Dr Guy H Walker, Professor Neville A Stanton, Professor Paul M Salmon

Having an accurate understanding of what is going on is a key commodity for teams working within military systems. 'Situation awareness' (SA) is the term that is used within human factors circles to describe the level of awareness that operators have of the situation that they are engaged in; it focuses on how operators develop and maintain a sufficient understanding of 'what is going on' in order to achieve success in task performance. Over the past two decades, the construct has become a fundamental theme within the areas of system design and evaluation and has received considerable attention from the human factors research community. Despite this, there is still considerable debate over how SA operates in complex collaborative systems and how SA achievement and maintenance is best supported through system, procedure and interface design.

This book focuses on the recently developed concept of distributed situation awareness, which takes a systems perspective on the concept and moves the focus on situation awareness out of the heads of individual operators and on to the overall joint cognitive system consisting of human and technological agents. Situation awareness is viewed as an emergent property of collaborative systems, something that resides in the interaction between elements of the system and not in the heads of individual operators working in that system.

The first part of the book presents a comprehensive review and critique of existing SA theory and measurement approaches, following which a novel model for complex collaborative systems, the distributed SA model, and a new modelling procedure, the propositional network approach, are outlined and demonstrated. The next part focuses on real-world applications of the model and modelling procedure, and presents four case studies undertaken in the land warfare, multinational warfare and energy distribution domains. Each case study is described in terms of the domain in question, the methodology employed, and the findings derived in relation to situation awareness theory. The third and final part of the book then concentrates on theoretical development, and uses the academic literature and the findings from the case study applications to validate and extend the distributed SA model described at the beginning of the book. In closing, the utility of the distributed SA model and modeling procedure are outlined and a series of initial guidelines for supporting distributed SA through system design are articulated.

From reader reviews:

Lucile Brown:

Here thing why this kind of Distributed Situation Awareness: Theory, Measurement and Application to Teamwork (Human Factors in Defence) are different and reliable to be yours. First of all reading through a book is good nonetheless it depends in the content of computer which is the content is as scrumptious as food or not. Distributed Situation Awareness: Theory, Measurement and Application to Teamwork (Human Factors in Defence) giving you information deeper since different ways, you can find any e-book out there but there is no e-book that similar with Distributed Situation Awareness: Theory, Measurement and Application to Teamwork (Human Factors in Defence). It gives you thrill looking at journey, its open up your own eyes about the thing that happened in the world which is probably can be happened around you. You can actually bring everywhere like in park, café, or even in your technique home by train. When you are having difficulties in bringing the branded book maybe the form of Distributed Situation Awareness: Theory, Measurement and Application to Teamwork (Human Factors in Defence) in e-book can be your alternative.

Marlon Hood:

Now a day folks who Living in the era just where everything reachable by talk with the internet and the resources in it can be true or not involve people to be aware of each information they get. How people have to be smart in receiving any information nowadays? Of course the correct answer is reading a book. Studying a book can help persons out of this uncertainty Information specially this Distributed Situation Awareness: Theory, Measurement and Application to Teamwork (Human Factors in Defence) book as this book offers you rich information and knowledge. Of course the information in this book hundred percent guarantees there is no doubt in it you may already know.

Leonard Palmer:

Nowadays reading books become more and more than want or need but also become a life style. This reading practice give you lot of advantages. Associate programs you got of course the knowledge the particular information inside the book in which improve your knowledge and information. The details you get based on what kind of e-book you read, if you want drive more knowledge just go with education and learning books but if you want really feel happy read one with theme for entertaining for example comic or novel. The actual Distributed Situation Awareness: Theory, Measurement and Application to Teamwork (Human Factors in Defence) is kind of guide which is giving the reader unpredictable experience.

Lucinda Brown:

Reading a book make you to get more knowledge from that. You can take knowledge and information from your book. Book is created or printed or descriptive from each source that will filled update of news. With this modern era like currently, many ways to get information are available for you. From media social just

like newspaper, magazines, science reserve, encyclopedia, reference book, book and comic. You can add your knowledge by that book. Isn't it time to spend your spare time to open your book? Or just trying to find the Distributed Situation Awareness: Theory, Measurement and Application to Teamwork (Human Factors in Defence) when you needed it?
