Disability in Science Fiction: Representations of Technology as Cure

In science fiction, technology often modifies, supports, and attempts to 'make normal' the disabled body. In this groundbreaking collection, twelve international scholars – with backgrounds in disability studies, English and world literature, classics, and history – discuss the representation of dis/ability, medical 'cures,' technology, and the body in science fiction. Bringing together the fields of disability studies and science fiction, this book explores the ways dis/abled bodies use prosthetics to challenge common ideas about ability and human being, as well as proposes new understandings of what 'technology as cure' means for people with disabilities in a (post)human future.
